

How It's Made

The challenge with CBD has always been getting the particles small enough to be properly sterilized.

By pioneering *new technology*, we're able to reduce the CBD particles to a level small enough to pass through a sterile filter for a *safe product*.

Patent Pending Technology

Atomize the CBD particle to reduce it to the size of a pico, small enough to be sterilized and more readily absorbed by the body.

Sterile Filtration Process

Pass the Pico IV solution through a sterile filtration process to remove any contaminants and leave only sterile CBD.

Rigorous 3rd Party Testing 100% Reliable. 100% Transparent.

Test for purity, potency, and sterility. Comprehensive testing includes checking for:

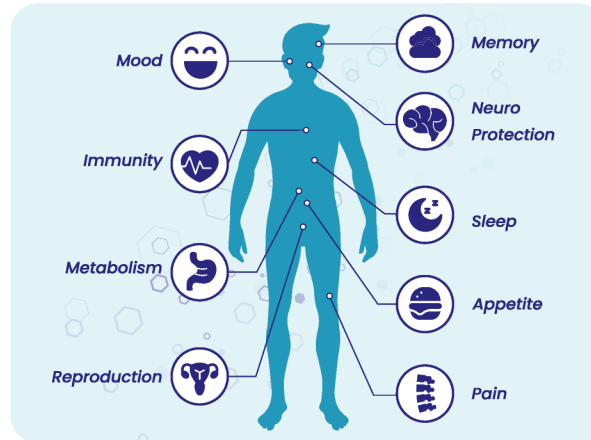

All third-party test reports are published on PicoIV.com

ENDOCANNABINOID SYSTEM

The **endocannabinoid system** (ECS) is a complex network of receptors and molecules found throughout your body that plays a crucial role in **maintaining balance**, or homeostasis. It influences a wide range of **essential functions** including:

ECS is much like your body's "air traffic control" system, constantly working to keep everything running smoothly. When it's out of balance, problems can arise in any of these areas, highlighting the importance of maintaining a healthy ECS for overall well-being.

ECS receptors respond to both:

Endocannabinoids

Naturally produced molecules within your body that bind to ECS receptors, like a key fitting into a lock, to trigger various responses like pain relief or mood regulation.

Phytocannabinoids

Compounds found in hemp plants, such as CBD, that can also interact with ECS receptors, mimicking the effects of endocannabinoids and supporting balance within the system.

Looking for **more information** regarding **CBD for IV infusion**?

Please visit our website at:

www.PICOIV.com

We have additional answers to common **FAQs**, **test results**, and more **information** regarding this breakthrough product.

Every product is third-party tested for purity and potency.

THE WORLD'S FIRST & **ONLY** STERILE CBD FOR IV INFUSIONS

Unique Benefits

Pico IV gives your body peak access to the many benefits that may include supporting overall health and wellbeing, and many other day-to-day issues.

Increased Absorption

Because the CBD is administered through an IV, your body is able to absorb nearly 100% of the dose, meaning you get more of the benefits in less time.

Natural, Safe, and Pure

Our CBD is naturally extracted from the hemp plant and third-party tested to make sure it is free from any contaminants and is safe to use in IV form.

About

CBD

also known as cannabidiol, is one of the many cannabinoids, or compounds, found naturally in the hemp plant.

★ *It is also one of the most popular cannabinoids on the market.*

Here are a few facts about CBD:

 CBD IS **NOT** PSYCHOACTIVE

which means it can't get you high and is completely legal in the US.

It's a completely natural ingredient extracted from hemp grown in the US.

Our CBD contains **ZERO** THC.

It interacts with your body's endocannabinoid system, a cell-signaling system within your body that helps regulate many of its natural functions.

Many users report that it helps support their body's natural homeostasis.

It's been a popular supplement used in tinctures, capsules, ointments, and now IV infusions.

It was first isolated and discovered in 1940.

Cannabinoids make up the broad spectrum.

CBD Broad Spectrum

CBD
(Cannabidiol)

CBD indirectly influences the endocannabinoid system (ECS) by boosting endocannabinoids and interacting with other receptors.

CBG
(Cannabigerol)

CBG is considered the "mother of all cannabinoids" and shows promise in various therapeutic areas.

CBN
(Cannabinol)

Primarily known for its potential sedative effects, CBN may help support restful sleep as part of a healthy lifestyle.

CBDa
(Cannabidiolic Acid)
CBGa
(Cannabigerol Acid)

Research on CBD-A and CBG-A is in its early stages, but they show promise in various therapeutic areas.

CBC
(Cannabichromene)

CBC may be most effective when combined with other cannabinoids due to the entourage effect.

For best results

Limit alcohol intake for 24 hrs post infusion

Hydrate and drink electrolytes post infusion

PLEASE DO NOT OPERATE HEAVY MACHINERY IF FEELING DROWSY OR EUPHORIC SHOULD OCCUR POST INFUSION.

Why Pico IV?

CBD IV Infusion is transforming the CBD industry and the way you can experience the benefits of CBD.

Maximum Absorption

Most methods of CBD usage have varying levels of absorption, whether that be ingestion, topical and sublingual. While it is still enough for you to experience the benefits, your body will only absorb a percentage of the total dose.

By utilizing water soluble technology and a CBD intravenous (IV) solution, users can experience maximum absorption of the CBD extract.

Completely Sterile

The challenge with CBD has always been getting the particles small enough to be properly sterilized.

By pioneering new technology, we're able to reduce the CBD particles to a level small enough to pass through a sterile filter for a safe and sterile IV Infusion.

Combination IV Infusions

While CBD IV Infusion can be used on its own to experience the benefits, it can also be combined with various other IV infusions to create a more full effect.

Speak with your provider today about what combination might be right for you.
